BEAN-TO-CUP BN70

RICCO  FABIO™

## BEAN-TO-CUP MODEL BN70

The soft modern lines of the BN70 underline a class of machine that is sure to compliment any environment, whether it be a reception, office or breakout area.

Available as a Freshbrew or a Fresh-Bean machine coupled with an 8 selection choice, the BN70 will provide for the most discerning applications.

Consistent drink quality is delivered time after time by the sophisticated electronic control module which drives the brewer unit, making the BN 70 a first class winner every time.

### Installation

Your Ricco Fabio sales consultant will advise you on the most suitable machine location and installation method and a trained engineer will connect your BN70 to your drinking water supply.

In some areas of the UK where 'hard water' causes concerns with limescale build-up, it may be desirable to install scale reduction filters. Your sales consultant will advise if this is appropriate in your location.

# Espresso & Cappuccino like never before!
