BEAN-TO-CUP BN800

RICCO  FABIO™

BEAN-TO-CUP MODEL BN800

The beauty of the **BN800** lies in a machine that is sure to provide for every environment, whether it be a reception, office or breakout area.

With up to 12 choices including Espresso coffees, cappuccino, Decaff and Chocolate options, there's something for everyone. Consistent drink quality is delivered time after time by the sophisticated electronic control module which drives the brewer unit. The unit can also be coupled with payment options – a truly flexible winner.

Installation

Your Ricco Fabio sales consultant will advise you on the most suitable machine location and installation method and a trained engineer will connect your BN800 to your drinking water supply.

In some areas of the UK where 'hard water' causes concerns with limescale build-up, it may be desirable to install scale reduction filters. Your sales consultant will advise if this is appropriate in your location.

Espresso, Cappuccino, Decaff and more!
